                                                              factor (TNF) for the treatment of vascular disease, cardiovascular disorders, thrombotic disorders, or illnesses or pathologies which are treatable by decreasing plasma fibrinogen. Typical conditions which thrombophlebitis, stroke, thromboembolic disorder or ischemic events. In one embodiment the antagonist used is an anti-TNE antibody (optionally chimeric, humanised or resurfaced), preferably one which binds to an epitope comprising at least 5 amino acids within the region TNE-alpha 87-108 and/or TNE-alpha 59-80. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This peptide sequence is a fragment of tumour necrosis factor-alpha (crre-alpha) corresponding to amino acid position 87-108 of the full length protein. This region is an epitope and is recognized and/or binds with anti-TNE activity. This fragment is used to describe a novel method of frequing or preventing acquired immune deficiency disease and infection with human immune deficiency virus (HTV) by co-administration of interleukin-2 (IL-2) and a chimeric antibody (Ab), or its fragment, against tumour necrosis factor (TNF). IL-2 and Ab are administered by injecting, orally, topically or are produced from gene therapy vectors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tumour necrosis factor-alpha; epitope; human immunodeficiency virus; HIV: ThY-alpha; anti-ThY; antibody; treatment; prevention; infection; acquired immune deficiency disease; interleukin-2; IL-2; gene therapy; systemic toxicity; CD4+ cell; inflammation; immune response.
                                                                                                                                                                                                                                                                                                                                       Gaps
                                                 The invention relates to the use of an antagonist of tumour necrosis

but preferably by intravenous injection or infusion. Usual doses are 0.01-100 (especially 1-40) mg/kg/day, in 1-6 portions or in sustained release form. Further doses may be given, just before or during relapse. Inhibition of TMF alpha by Ab alleviates some of the systemic toxicity associated with administration of IL-2 (which increases the level of CD4+cells but also stimulates production of TMF, high levels of which cause unwanted inflammatory and immunological responses). Blockade of TMF allows administration of higher doses of IL-2 than would be otherwise
                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The amino acid sequence of a part of the 4th exon from the tumour necrosis factor (TNF)-alpha. The protein has the peptide AAR72454 attached to the N-terminal amino acid. The fusion protein can be used in pharmaceutical compositions for inhibiting metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                     .;

DNA sequence encoding hTNF was synthesised chemically and inserted into vector plasmid. Recombinant plasmid was cut with restriction enzyme and DNA fragment coding for new bloactive polypeptide was obtd. The new bloactive polypeptide has ten N-terminal AAA deleted. It has antitumour activity greater than hTNF and can be produced by culturing bacteria transformed with a plasmid contg. DNA encoding the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Use of divalent metal ions for making Apo-2 ligand and in formulations containing Apo-2 ligand for increasing yield and stability of ligand trimers, useful for therapeutic applications -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; Apo2 ligand: divalent metal ions; viral infection; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ligand and divalent metal ions. Apo-2 ligand and the formulation are useful for treating cancers and viral infections. Addition of divalent metal ions for making Apo-2 ligand and formulations containing Apo-2 ligand results in increased yield and stability
                                                 New bioactive polypeptide - has antitumour activity, and is obtd. by culturing bacteria transformed with plasmid contg. DNA sequence of the polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a formulation comprising Apo-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 147;
                                                                                                                                                                                                                                                                                                           Length 147;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Leung
                                                                                                                                                                                                                                                                                                                                              Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New biologically active polypeptide has cytotoxic activity specifically for tumour cells and, therefore, is expected to be used as an anticancer drug. It is derived from human TMF by deleting 11 N-terminal AAS. (See also J63188396, AAN81624 and AAP81236).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New biologically active polypeptide - useful as anticancer agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò

Apol-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins (including homologues), and their antibodies. The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte ocompounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes mellitus, multiple sclerosis, mysthenia gravis, Grave's disease,
                                                                                                                                                                                                    The present sequence is a C-terminal region of human Tumour necrosis factor (TNF) which has 20-25% sequence identity with C-terminal region of human TALL-1 protein extracellular domain.
                                                                                                                                          autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa.
      present invention relates to Tumour necrosis factor (TNF) and
                                                                                                                                                                            The TALL-1 protein and its couseful in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (TEIJ ) TEIJIN KK.

The mutant of tumour necrosis factor (TNF) is constructed by modifying the sequence of human TNF and deleting 7 N-terminal amino acids. The mutant has activity 2.8 times that of human TNF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The polypeptide was obtd. by cleaving DNA encoding mature TNF. The resulting fragment was then ligated to a synthetic DNA adapter and inserted into an expression vector for prodn. of the polypeptide which has tumoricidal activity. The N-terminal may have up to three residues deleted resulting in N-terminals of: Met-Ser-Asp-Lys, Met-Asp-Lys.
                                                                                                                                                                                              It is expressed using expression vector pTNF 416 in E.coli.
The cells are then cultured to give the mutant in an ant. of 15.5% of total proteins. The antitumour activity of this protein was measured using mouse L-929 fibroblast cells. 100 microlitres of E.coli lyaste contg. 0.00006 units had specific activity of the mutant of 0.0000088 units/mg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tumoricidal polypeptide(s) - are prepd. by cleaving specified DNA with pertinent restriction enzyme(s) and bonding with conventional synthetic DNA adaptor.
                                                                 New bioactive polypeptide - having antitumour activity and higher activity than human tumour necrosis factor.
                                                                                                                                                                                                                                                                                                                                         100.0%; Score 115; DB 8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is derived from the human tumour necrosis factor amino acid sequence. A region corresp. to the N-terminal 11 residues of the natural seq. is deleted and repair synthesis using the AA sequence: Arg-Lys-Arg is carried out. Fig. 1 is amended to produce the new sequence. Resultant polypeptide has an increased antitumour activity (1.6 x 100, 000 000) compared with human TNF (2.3 x 10,000 000).
A recombinant microorganism cell transformed by recombinant plasmid confg. the DNA region coding for the polypeptide is cultured. The polypeptide is isolated from the resulting culture. The microorganism is pref. Escherichia coli.

                                                                                                                                                                                                                                                                                        Sequence 1, Application US/07668517
Patent No. 5262309
GENERAL INFORMATION:
APPLICANT: Satoshi NAKAMURA et al.
TITLE OF INVENTION: No. 5262309el Physiologically Active
TITLE OF INVENTION: Polypeptide, Recombinant Plasmid, Recombinant Microorganism
TITLE OF INVENTION: Cell, Pharmaceutical Composition and Method of Recovering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

Sequence 9, Application US/09105343A

Sequence 9, Application US/09105343A

Patent No. 6207642

GENERAL INFORMATION:
APPLICANT: WILEY, S.R.
TITLE OF INVENTION: MEMBER OF THE TNF FAMILY USEFUL
TITLE OF INVENTION: FOR TREATMENT AND DIAGNOSIS OF DISEASE
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Abbott Laboratories
STREET: 100 Abbott Laboratories
CITY: Abbott Park
CITY: Abbott Park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 147;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 115; DB 4;

Patent No. 5262309
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: No. 5262309el Physiologically Active
TITLE OF INVENTION: Polypeptide, Recombinant Plasmid, Recombinant Microorganism
TITLE OF INVENTION: Cell, Pharmaceutical Composition and Method of Recovering
NUMBER OF SEQUENCES: 50
CORRESPONDENCE ADDRESS:
                                                        No. 5262309el Physiologically Active
Polypeptide, Recombinant Plasmid, Recombinant Microorganism
Cell, Pharmaceutical Composition and Method of Recovering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 115; DB 1;

Sequence 8, Application US/07668517

Sequence 8. Application US/07668517

Patent No. 5262309

GENERAL INFORMATION:
APPLICANT: Satoshi NAKAMURA et al.
ATITLE OF INVENTION: No. 5262309el Physiologically Active
TITLE OF INVENTION: Polypeptide, Recombinant Plasmid, Recombinant Microorganism
TITLE OF INVENTION: Cell, Pharmaceutical Composition and Method of Recovering
NUMBER OF SEQUENCES: 50

CORRESPONDENCE ADDRESS:
ADDRESSEE: Wenderoth, Lind & Ponack
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Oxytocin - spotted ratfish
N;Alternate names: neurophysin I
N;Contains: neurophysin I
C;Species: Hydrolagus colliei (spotted ratfish)
C;Accession: A92774; A01450; B01450
R;Pickering, B.T.; Heller, H.
J. Endocrinol. 45, 597-606, 1969
A;Title: Oxytocin as a neurohypophysial hormone in the holocephalian elasmobranch fis A;Reference number: A92774; MUID:70088110; PMID:5366118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N.Alternate names: neurophysin I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nakamura S., Takenaka O., Takahashi K.;
"Fibrinopeptides A and B of baboons (Papio anubis, Papio hamadryas,
and Theropithecus gelada): their amino acid sequences and
evolutionary rates and a molecular phylogeny for the baboons.";
J. Biochem. 94:1973-1978 (1983).
-!- FUNCTION: FIBRINGEN HAS A DOUBLE FUNCTION: YIELDING MONOMERS THAT
POLYMERIZE INTO FIBRIN AND ACTING AS A COFACTOR IN PLATELET
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AGGREGATION.

-!- SUBUNIT: HEXAMER CONTAINING 2 SETS OF 3 NONIDENTICAL CHAINS (ALPHA, BETA AND GAMMA), LINKED TO EACH OTHER BY DISCLEIDE BONDS.
-!- MISCELLANEOUS: CONVERSION OF FIBRINGEN TO FIBRIN IS TRIGGERED BY THROMBIN, WHICH CLEAVES FIBRINOPEPTIDES A AND B FROM ALPHA & BETA CHAINS, AND THUS EXPOSES THE N-TERMINAL POLYMERIZATION SITES RESPONSIBLE FOR THE FORMATION OF THE SOFT CLOT.

Int. J. Blochem. 22:567-771(1990).
-!- FUNCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF BRADYKIMIN BY INHIBITING THE KINASES THAT INACTIVATE IT.
IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 18; DB 1; Length 10; Pred. -!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom duct.
-!- SIMILARITY: BELONGS TO THE A-SUPERFAMILY OF CONOTOXINS. ALPHA-TYPE
bacteria and antifungal activity against S.cerevisiae.
-:- SUBUNIT: The nucleosome is an octamer containing two molecules of H2A, H2B, H3, and H4; which wrap approximately 146 bp of DNA.
-:- SUBCELIULAR LOCATION: Nuclear.
-:- MASS SPECTROWETRY: MW-13639; METHOD-MALDI.
-:- SIMILARITY: BELONGS TO THE HISTONE H2A FAMILY.
InterPro; IPR002119; Histone H2A.
PROSITE: PS00046; HISTONE_H2A, PARTIAL.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptides are provided which prime neutrophils for superoxide production and an enhanced respiratory burst following treatment with N-formyl-L-methionine-L-leucyl-L-phenylalamine. The peptides are described generically. They are fragments from the region of amino acids 54 to 94 of human TNF, or analogues of such fragments. Their neutrophil·stimulating activity can be used in the treatment of diseases such as ADBS, cancer, rheumatoid arthritis, ARDS, cystic fibrosis, tuberculosis, crohn's disease, sarcoidosis, leprosy, syphilis and malaria. The present sequence is one of 6 specific peptides having the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TNF; tumour necrosis factor; neutrophil; superoxide; inflammation; ADB, cancer; rheumatoid arthritis; ARDS; cystic fibrosis; therefore, a factorial sis; TB; Crohn's disease; sarcoidosis; leprosy; syphilis; malaria; adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
